What is Glaucoma?

Glaucoma is a condition that damages the optic nerve, which is responsible for sending visual information from the eye to the brain. Glaucoma is usually caused by increased pressure inside the eye, which can occur when the fluid that circulates inside the eye does not drain properly. If left untreated, glaucoma can lead to blindness.

What is Gunner Goggles Surgery?

Gunner Goggles Surgery is a minimally invasive procedure that can help lower eye pressure and improve vision in patients with glaucoma. The procedure involves inserting a tiny stent into the eye's drainage system. The stent helps to keep the drainage system open, which allows fluid to drain more easily from the eye.

Gunner Goggles Surgery is typically performed on an outpatient basis, and it takes about 30 minutes to complete. The procedure is generally well-tolerated, and most patients experience little to no discomfort during or after the surgery.

Who is a Candidate for Gunner Goggles Surgery?

Gunner Goggles Surgery is an option for patients with glaucoma who have not responded to other treatments, such as medication or laser therapy. The surgery is also an option for patients who are at risk of developing glaucoma, such as those with a family history of the condition.

What to Expect Before Gunner Goggles Surgery

Before Gunner Goggles Surgery, your doctor will perform a comprehensive eye exam to assess your vision and eye health. Your doctor will also discuss the risks and benefits of the surgery with you, and they will answer any questions you may have.

What to Expect During Gunner Goggles Surgery

Gunner Goggles Surgery is performed in an operating room under local anesthesia. During the surgery, your doctor will make a small incision in the eye and insert the Gunner Goggles stent into the eye's drainage system. The surgery typically takes about 30 minutes to complete.

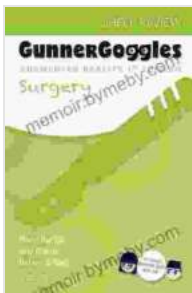

What to Expect After Gunner Goggles Surgery

After Gunner Goggles Surgery, you will be taken to a recovery room where you will be monitored for any complications. You will be able to go home the same day as your surgery, but you will need to take it easy for the first few days. Your doctor will give you specific instructions on how to care for your eye and when to follow up with them.

Gunner Goggles Surgery is a safe and effective procedure that can help patients with glaucoma regain their vision. The surgery is minimally

invasive, well-tolerated, and has a high success rate. If you are considering Gunner Goggles Surgery, be sure to talk to your doctor to learn more about the procedure and whether it is right for you.
